

*The magic wand sent us to a mysterious bedroom. We found out that it belonged to Ava, a little girl who invents robots!*

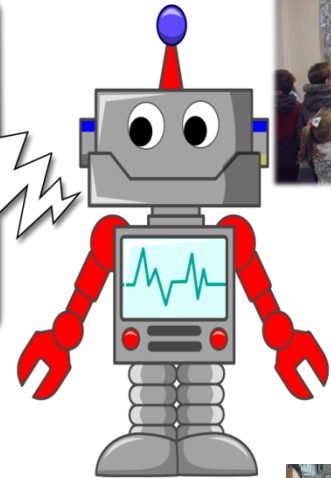

What jobs to robots do?

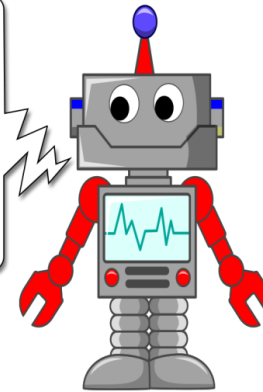

Who is Ava and why does she make robots?

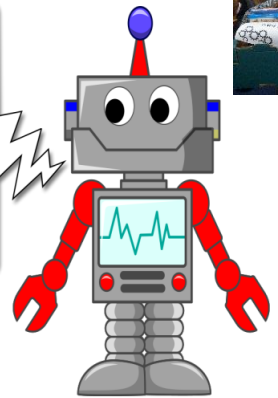

What was the first robot ever invented?

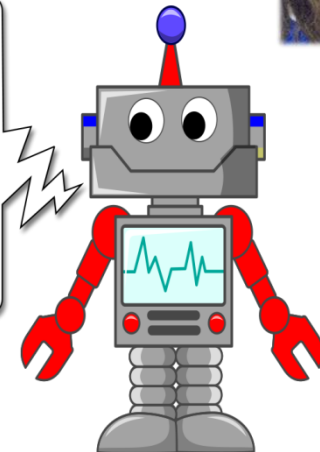

How do robots help people?

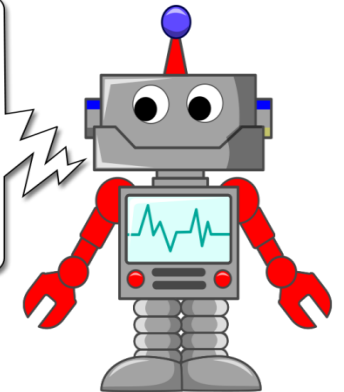

How do you build a robot?

Can robots see, hear and communicate?

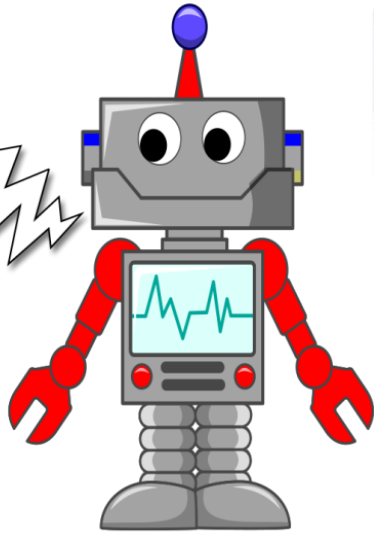

How do robots know what to do?

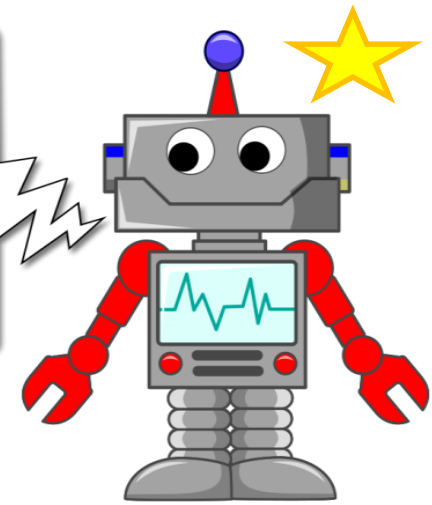

# Look at our fantastic learning so far...

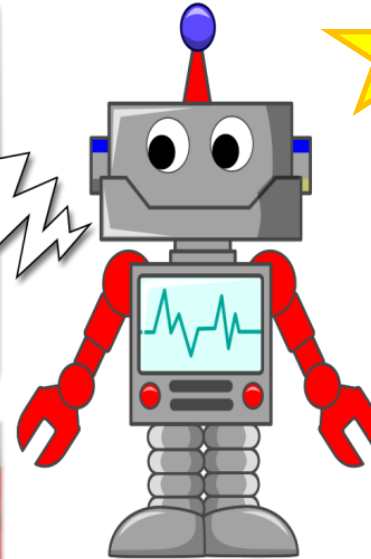

We wanted to find Ava so used our super sentences to describe her.

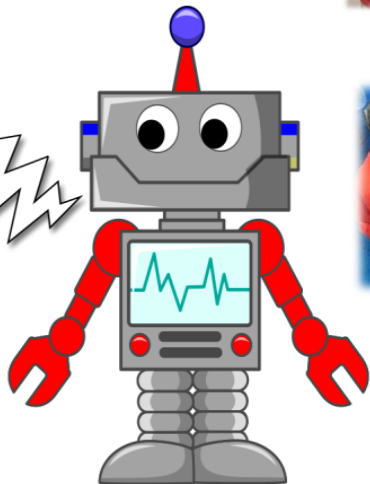

We practised our number facts to make numbers up to 20.

We have written instructions to direct our robot around the school.

We programmed our own robots using algorithms.

We have used our imaginations to create a robot with a range of materials.
